

# Working site services

During 60 years of history we have built a unique corporate culture largely based on innovation and customer service. Technical innovation, especially, is our birthright.

**Above**  
Super Bruco, "No Man Entry™" technology.

The conception and rolling out of mobile laboratories and the substantial improvements brought to traditional Vacuum Drilling are just some of the breakthroughs we are proud of.

### **Mobile laboratories**

Advanced analytical tools allow us to operate everywhere, with prompt and firm resolve. The perfect combination of cutting-edge technology and highly specialised personnel makes us undisputed market leaders. Thanks to our reliable methodologies, we can issue certificates of analysis and compliance according to the current legislations.

---

### **Vacuum Drilling**

Traditional drilling and destructive excavation methods are not always applicable. We developed an innovative Vacuum Drilling technique by using non-invasive methods. Our suction excavators are the ultimate solution in delicate and risky situations.
